EDUCATION

DIT University

B.Tech in Computer Science - CGPA: 6.17

Dehradun, Uttarakhand

July 2023 – July 2027

Red Rose Senior Secondary School

Class XII - 81%

Lucknow, Uttar Pradesh

July 2020 – July 2022

City Montessori School

Class X - 84%

Lucknow, Uttar Pradesh

Completed July 2020

PROFESSIONAL SUMMARY

B.Tech Computer Science student specializing in Software Engineering, Cybersecurity & AI Systems. Skilled in Java, Python, Web VAPT, Data Structures & Algorithms, SQL, and MLOps. Built high-impact projects including an automated Web Application VAPT Lab, a Corrective RAG (CRAG) pipeline, and an Enterprise AI Operations platform. Proven leadership managing large-scale university events.

SKILLS

Programming Languages: C, Python, Java, JavaScript, HTML5, CSS3, SQL

Libraries / Frameworks: LangChain, FastAPI, ChromaDB, PyTorch, OpenCV, NumPy, MediaPipe, Java Swing

Security & MLOps Tools: OWASP ZAP, Nmap, Burp Suite, Docker, Kubernetes, Prometheus, Grafana, MLflow, Git, GitHub, VS Code, IntelliJ IDEA

Databases & Concepts: MySQL, RESTful APIs, OOP, Data Structures & Algorithms (DSA), Multithreading, Web Application VAPT, OWASP Top 10, CVSS v3.1

PROJECTS

Web Application VAPT Lab & Security Assessment

github.com/Ishaan012846/web-vapt-lab

- Engineered an isolated local VAPT laboratory containerizing OWASP Juice Shop (127.0.0.1:3000), implementing Python scope-validation modules to strictly enforce loopback allowlists.
- Automated service version enumeration (Nmap) and passive vulnerability scanning (OWASP ZAP baseline), normalizing findings into standardized JSON schema definitions.
- Conducted manual security assessments via Burp Suite to validate SQL Injection, XSS, and IDOR vulnerabilities, generating Markdown reports and a responsive static HTML metrics dashboard.

Python, Docker, OWASP ZAP, Nmap,
Burp Suite, HTML/CSS/JS

Corrective RAG (CRAG) System

github.com/Ishaan012846/crag-ai-system

- Engineered a Corrective Retrieval-Augmented Generation (CRAG) pipeline, reducing LLM hallucination rates by 35% via dynamic relevancy scoring.
- Implemented query re-writing algorithms and hallucination detection with automated Tavily web search fallbacks, boosting factual accuracy to 92%.
- Utilized ChromaDB vector embeddings and LangChain framework to orchestrate self-corrective retrieval workflows processing 50+ queries/min.

Python, LangChain, OpenAI API,
ChromaDB, FastAPI

Enterprise AI Operations Platform

github.com/Ishaan012846/enterprise-ai-ops

- Developed an end-to-end Enterprise AI Operations (AIOps/MLOps) platform to monitor, auto-scale, and manage 10+ production ML microservices.
- Integrated real-time telemetry, latency monitoring, and token usage tracking via Prometheus and Grafana dashboards, maintaining 99.9% uptime.
- Containerized microservices using Docker and orchestrated Kubernetes deployments with API gateway security, cutting deployment overhead by 40%.

Python, FastAPI, Docker, Kubernetes,
Prometheus, MLflow

POSITIONS OF RESPONSIBILITY & ACHIEVEMENTS

- Overall Coordinator - Avahan 2024:** Managed end-to-end operations, crowd logistics, budgeting, and a committee of 40+ student volunteers for DIT University annual freshman program, serving 3,000+ incoming students.
- Solved 120+ Data Structures & Algorithms (DSA) problems on LeetCode using Java.

CERTIFICATIONS

- Java (Basic) – HackerRank
- Problem Solving (Basic) – HackerRank
- SQL (Basic) – HackerRank
- OCI AI Foundations – Oracle
